Summary

Hello! I'm Ryan Yeaman, a web developer that's passionate and dedicated to bringing clients' websites to their full potential, whether it's a solo project or working collaboratively with a team. Since 2021 I have been working on projects to expand my skill sets as a front-end developer. When I was first learning web development I was working as a heavy equipment operating engineer. After completing my own projects, I knew that the software industry was where I wanted to make a career, so I dedicated most of my time to keep learning and completing more projects. I'm currently looking for employment at a company to grow as a front-end developer to help bring as much collaborative teamwork to complete any projects that come my way.

TECHNICAL SKILLS

LANGUAGES: Javascript(ES6), HTML5/CSS

FRAMEWORKS/LIBRARYS: React.js, Node.js, Express

PROJECTS

The projects below can be found on my GitHub.

- ALDERWOOD DIGGING CREW

This is a website I made for my old construction company that I used to own a couple of summers ago. This website was a full React.js project.

- COLONY-R

This is a "concept website" that I created about a construction company that sells custom-built homes on the planet Mars. In this project, I show my skills with Node.js and Sendgrid to send templates emails to users trying to inquire about homes they are interested in buying.

- SAM'S RESIN SHOP

This is a website I made for my girlfriend so she could sell her custom resin art. In this project, I used the local storage to pass data through different pages to simulate adding items to a cart.

Education

Udemy

Web Developer

Skills

Figma • React.js • Web Development • JSON • Cascading Style Sheets (CSS) • HTML • Node.js
• JavaScript • Front-End Development • Express.js
